6 - Which assignment or activity would you most recommend the instructor to use again when teaching the course in the future and why?

Response Rate	15/45 (33.33%)

- Assigned homework
- Can give some extra credit for homework.
- Panopto An efficient way to preview new knowledge.
- provide panopto for self-learning
- I would most recommend the synchronous videos. It allows us to learn new concepts at our own pace.
- The Panopto was great and please keep it.
- The asynchronous mode which expects students to watch videos ahead of class and the 7th week of free choice.
- Recording the explanation of slides. It helps me get more understanding of the materials.
- recording. It allows us to learn at our own pace, and we can well review it.
- Lectures were pretty good.
- Selecting topics for Week 7
- I think it is good to allow us to try the homework without limitation on times.
- Watching videos before the lectures because it can improve my knowledge of the new definitions and help me adapt into the lecture.
- The teaching method of giving lectures online is extremely good.
- Keep posting the preview lectures on sakai

7 - Which assignment or activity could be improved and how?

Response Rate	15/45 (33.33%)

- Homework should be given solutions for those who cannot handle it to figure out.
- The water-pens used during the lectures could be replaced by some with darker ink. They don't see clearly during the lectures sometimes.
- The tests are too difficult.
- None.
- nothing
- Some of the webwork homework didn't correspond learning contents and sometimes the methods we would learn later appeared in earlier homework. These can be improved.
- Maybe attach solutions to problems on WeBWork
- No.
- Sometimes I think we do need peer tutor or TA to instruct us to do some exercises about the learning content.
- The tests were very difficult, the exams we had in class were much harder than the placement exam we were given.
- -
- Maybe we need more explanations on the course we learn by ourselves. Sometimes I will be a little confused.
- The weekly reviewing. I hope the professor can add a review class weekly to help us construct more solid foundation.
- The meaning of professional words in mathematics is sometimes hard to find the right translations.
- add back recitation courses

Response Rate	7/45 (15.56%)

• Nothing.

• Professor Jiu explains problems clearly.

• I learned study methods essential for future learning

• No.

• The course is inspiring and enlightening for students and greatly stimulates our interest in learning math problems.

• I think listing this course as the requirement for anyone with previous calculus experience is misleading. The course was very much geared toward the Chinese education system, which is much more rigorous in terms of the complexity of calculus covered than most international student's education. I took two years of IB level calculus at my high school and still felt like I was miles behind where I needed to be for this course. I know other international students in the class felt similarly. I think either the class needs to be reworked to work better for international students, or there needs to be a different course for students with more limited calculus experience. This needs to be properly communicated to students.

• Make the math questions on sakai graded so students are more encouraged to keep grades up and study more.

14 - This question is about Prof. Lin JiuAny other comments or suggestions for Prof. Lin Jiu? -	
Response Rate	14/45 (31.11%)

- No
- Nice but strict.
- Brilliant.
- maybe professor can use a pen with ample ink, since sometimes it is hard to figure out what he wrote on the blackboard due to the pen with no ink.
- Professor Jiu explains problems clearly.
- I really enjoyed this course and your teaching style! To me, your homework and grading policies are all very reasonable.
- For those who are comfortable with his style, it's great. For those who don't, it's tragic.
- Really inspiring
- No.
- Very nice teacher
- Prof. Lin Jiu is very open—minded. His class is both serious and attractive.
- Worked solutions for the webwork would really be helpful sooner than two weeks after they are posted. Since exams are every two weeks we need to have those for review sooner than we were getting them.
- An incredibly responsive professor eager to help students better grasp the course materials. At the same time, it could have been incredibly wonderful to listen to the lectures in person and follow them in real time, but the recordings were convenient to access at all times
- Prf. Lin Jiu is a responsible and knowledgeable teacher who not only offer us many useful examples to expand our knowledge, but also give us many advanced aid after class.

15 - About Online LearningPlease provide comments and/or suggestions on any aspects of your online learning experience this term.	
Response Rate	11/45 (24.44%)

- No
- Homework on WebWork is helpful.
- good
- I benefited a lot from the online learning part because I could learn at my own pace. I hope that this form can be kept in the future.
- I had a pre-class video to watch about the lecture content ahead and was able to practice with problems online. Overall it's great
- I really like the part and I hope it could be passes on
- Maybe the WebWork system can provide mathematical symbols.
- Good
- My online learning experience is very useful since it helped me prepare for the test, and meanwhile it is also very convenient.
- Learning was all in person
- We need to watch online videos before classes to preview the class.
